IN THE CLAIMS

1-14 (Previously Cancelled)

- 15. (Previously Amended) The process of claim 16, comprising forming an oxide over said silicided bitline.
- (Currently Amended) A process of fabricating a memory cell 16. comprising a substrate that comprises a first region and a second region with a channel therebetween, the method comprising:

forming a gate above said channel of said substrate, wherein said gate comprises a polysilicon layer;

forming a bitline subsequent to said forming said gate comprising said polysilicon layer; and

siliciding said bitline.

- 17. (Original) The process of claim 16, comprising siliciding said polysilicon layer.
- 18. (Original) The process of claim 16, wherein said siliciding of said bitline and said polysilicon layer occur simultaneously.

Examiner: Vu, Quang D.

Serial No.: 09/885,426

- 2 -

19. (Previously Amended) The process of claim 16, comprising:

forming a charge trapping region that contains a first amount of charge; and

forming a layer between said channel and said charge trapping region, wherein said

layer has a thickness such that said first amount of charge is prevented from directly

tunneling into said layer.

- 20. (Original) The process of claim 19, wherein said charge trapping region comprises silicon nitride.
- 21. (Previously Amended) The process of claim 16, wherein said gate comprises an N-type material.
- 22. (Original) The process of claim 21, wherein said gate comprises a polycrystalline silicon.
- 23. (Original) The process of claim 19, further comprising forming an insulating layer on said charge trapping region.
- 24. (Original) The process of claim 23, wherein said insulating layer comprises silicon dioxide.

AMD-E306/JPH/MJB Examiner: Vu, Quang D.

Serial No.: 09/885,426 Group Art Unit: 2811 25. (Original) The process of claim 24, wherein said charge trapping region comprises silicon dioxide.

26. (Previously Amended) The process of claim 16, wherein said memory cell comprises an EEPROM memory cell.

27. (Previously Amended) The process of claim 16, wherein said memory cell comprises a two-bit memory cell.

28. (Previously Amended) The process of claim 16, wherein said substrate comprises a P-type substrate.

29. (Previously Amended) The process of claim 16, further comprising scaling the length of said bitline.

30. (Original) The process of claim 29, wherein said scaling comprises reducing the thermal cycle of said bitline.
